

Focused on the finer detail

Since 1980 Defremm has specialised in cold forming production from wire made of carbon steel, aluminium alloy, copper, brass and stainless steel. The company has made a name for itself thanks to emphasis on precision quality and customer service.

Located in the north of Italy Defremm manufactures special parts to customer drawings for different applications. These include the automotive industry, household appliances, fittings for plumbing and sports equipment. The company also produces fasteners as well as standard parts such as rivet nuts and blind rivets.

The company has a wide range of horizontal heading machines with from 2 to 6 stations. With a view to meeting increasingly complex customer requirements it continually invests in advanced machinery for recovery, threading, punching, turning, assembly and optical control selection.

Defremm's experienced team carries out technical and feasibility studies to co-design products together with clients. It then designs and builds the necessary tools in its own workshop to manufacture initial samples and standardise production.

Defremm will continue with this focus on research and development in order to guarantee clients the innovative solutions they have come to expect.

More about Defremm can be found at its new interactive website where the production range can be seen and an updated catalogue downloaded. Defremm is also always delighted to meet with existing and prospective clients at international events; the next will be at Fastener Fair Stuttgart in February 2013.

Production quality clear to see

Thanks to investment in new technologies and the quality of the products and services it offers, and despite the international crisis impacting various industries and distributors throughout Europe, MECAVIT has managed to gain significant new orders for special items to be used in strategic areas of mechanical sophistication.

In 2012 exports represented about 70% of MECAVIT's turnover and this figure is expected to increase further in coming years. The research and the experience that has matured over the years, alongside the business relationship it has forged with important international companies, have helped MECAVIT reach a top quality level.

MECAVIT has a high tech laboratory equipped with modern technology handled by professional technicians, who can carry out any kind of test on screws to check mechanical resistance and material analysis and to issue several kind of certificates.

The MECAVIT production line is also equipped with a very modern belt-conveyor furnace for the heat treatment of the carbon steel items produced in-house. The plant is a latest generation, totally automatic annealing furnace, which can be remotely controlled thanks to its sophisticated information systems. It provides a highly flexible capability precisely suited to MECAVIT's production. On demand MECAVIT can provide certification confirming the quality of heat treatment for any item.

Recently MECAVIT has added a short video to its website showing the production process.

The high precision turning company

Colombo Giovanni & Figli Srl was incorporated in Abbadia Lariana in the immediate post war period as a one-man firm producing screw nuts. Rapid growth driven by its founder and sons has resulted in an industrial entity that now employs 29 people and has modern and technologically sophisticated equipment.

Today Colombo Giovanni & Figli Srl has a well established presence in both national and international markets and presents itself as the ideal partner for all companies looking for high quality turned parts produced in steel, special steel, stainless steel, brass and aluminium. The company's mission is to be a strategic partner, not just a supplier, for all companies requiring high quality turned parts and 360 degree top of the range service.

Colombo Giovanni & Figli Srl specialises in producing high quality turned parts according to specific customer drawings for the automotive, electronic, hydraulic and general engineering sectors. Production is carried out on Gildemeister and Mori Say multispindle machines, all equipped with Pietro Cucchi bar loaders. The company also has a well equipped department to perform secondary operations and component assembly, as well as a quality department and special camera equipped inspection equipment to carry out 100% quality checks. The production lines are also installed with a software system that allows the performance of Statistical Process Controls.

Colombo Giovanni & Figli Srl is committed to constantly increasing the quality standards of its products and services through well-defined investment and personnel training plans and aims, it says, "to be a solid landmark for all our customers."
