

Special designed locknut

Hall: 21
Stand: K53

As an engineering based supplier of critical components to many industries, including heavy truck, construction equipment and farm machinery, Industrial Nut Corporation has designed and developed a special locknut for these industries.

Industrial Nut explains that it is a very high tech product that can not be compared with any other locknut solution. It works very easily and for the complete supply chain it's a great advantage to work with this product. Especially for heavy truck applications it's a very secure solution for places that are difficult to reach for maintenance or replacement, for example the inside of an axle.

All Industrial Nut products meet the highest demands of quality and PPAP requirements.

With this product Industrial Nut highlights that it has again maintained its mission to supply the best nut for the customer's application. While the company is most noted for its trademarked BLUE nylon insert locknuts, it continues to manufacture a wide range of special, inch and metric series, nuts to customer print.

"If you would like to know more about this product or any of our other products and services please visit us at Fastener Fair Hannover - Hall 21, stand K53."

Precision quality

Hall: 21
Stand: H10

Since 1980 Defremm S.p.A has specialised in cold forming production from wire made of carbon steel, aluminium alloy, copper, brass and stainless steel.

Defremm, located in the north of Italy, manufactures special parts to customer drawings for different applications. These include the automotive industry, household appliances, fittings for plumbing, and sports equipment. Defremm also produces fasteners, as well as standard parts such as rivet nuts and blind rivets.

The company has a wide range of horizontal heading machines with from 2 to 6 stations. With a view to meeting increasingly complex customer requirements Defremm continually invest in advanced machinery for recovery, threading, punching, turning, assembly and optical control selection.

Defremm's experienced team carry out technical and feasibility studies to co-design products together with clients. It then designs and builds the necessary tools in its workshop to manufacture initial samples and standardise production.

"We will continue with this focus on research and development in order to guarantee our clients the innovative solutions they have come to expect."

- Brass Pin & Socket
- Brass Anchor
- Brass Insert
- Brass Specser
- Mirror Screws with Cap
- Nut and Bolt
- Brass & M.S. Machine Screws
